SOURCEBOOK jamovi **ANNOTATED OUTPUT**

Abstract: This chapter is intended to facilitate the connection between standard introductory statistics concepts and their implementation in jamovi. It shows the output from various types of analyses, describes how to interpret the output, and shows the link between hand calculation formulas and jamovi output. Results derive from the examples in the previous chapter of this project.

Keywords: jamovi output, annotation, statistical interpretation

Original: July 2017 Updated: January 2025

This document is part of an online statistics sourcebook.

TABLE OF CONTENTS FOR THIS CHAPTER

Frequencies and Descriptives	3
Correlations	4
Confidence Intervals	5
One Sample t Test	6
Paired Samples t Test	7
Independent Samples t Test	8
OneWay ANOVA	9
Post Hoc Comparisons	10
Repeated Measures ANOVA	11
Factorial ANOVA	12

Frequencies and Descriptives

The "Mean", "Standard Deviation", and "Variance" are all calculated as unbiased estimates of the respective population parameter. Here, the mean is determined as the average of the scores weighted by their frequencies:

$$M = \frac{\sum (fY)}{N} = \frac{(2 \times 0) + (1 \times 3) + (2 \times 4) + (1 \times 5) + (1 \times 7) + (1 \times 8)}{8} = 4$$

The "Variance" and "Std. Deviation" are both functions of the Sum of Squares (not shown in the output) of the scores in the frequency distribution:

$$SS = \sum_{X} f(Y - M)$$

$$SS = 2(0 - 4)^{2} + 1(3 - 4)^{2} + 2(4 - 4)^{2} + 1(5 - 4)^{2} + 1(7 - 4)^{2} + 1(8 - 4)^{2} = 68$$

Then, the "Variance" (also known as Mean Squares) is calculated as:

$$MS = \frac{SS}{(N-1)} = \frac{68}{7} = 9.714$$

Finally, the "Std. Deviation" is determined by:

$$SD = \sqrt{MS} = \sqrt{9.71} = 3.117$$

"Percentiles" provide the scores associated with particular percentile ranks. For example, the 50th percentile is the score in the following position:

Position = PR(N + 1) = .50(8 + 1) = 4.5

Thus, the score at the 50^{th} percentile is the 4.5^{th} score in the frequency distribution – a score of 4.

Correlations

(Additional analyses have been added for the sake of completeness!)

Descriptives

Descriptives

		Outcome1	Outcome2	
	N	4	4	
(Missing	0	0	
	Mean	2.000	6.000	
	Standard deviation	2.449	2.449	

Correlation Matrix

Correlation Matrix

These statistics were obtained using the "Descriptives" command described on the previous page of this guide. Note that they are calculated separately for each variable.

This quadrant represents the relationship between the two variables.

The calculations are dependent on the "Covariance" (COV), which is not determinable from the summary statistics provided, but rather the data. Therefore, the calculations for it are not shown here.

"Pearson's r" is a function of the covariance and the standard deviations of both variables:

$$r = \frac{COV}{(SD_X)(SD_Y)} = \frac{3.000}{(2.45)(2.45)} = .500$$

Though the statistic is not shown, *t* provides the standardized statistic for testing whether the correlation differs from zero:

$$t = \frac{r}{\sqrt{(1 - r^2)/(N - 2)}} = \frac{.500}{\sqrt{(1 - .500^2)/(4 - 2)}} = .816$$

The *t* statistic follows a non-normal (studentized or *t*) distribution that depends on degrees of freedom. Here, df = N - 2 = 4 - 2 = 2. A *t* with 4 *df* that equals .816 has a two-tailed probability (*p*) of .500, which is not a statistically significant finding.

Confidence Intervals

One Sample t Test

Paired Samples t Test

Independent Samples t Test

OneWay ANOVA

(Additional analyses have been added for the sake of completeness!)

Post Hoc Comparisons

(Additional analyses have been added for the sake of completeness!)

Descriptives

Repeated Measures ANOVA

(Additional analyses have been added for the sake of completeness!)

Factorial ANOVA

(Note that some aspects of this output have been rearranged for the sake of presentation!)

Overall, all of the between-group variability is a function of the group means and sample sizes:

$$SS_{MODEL} = \sum_{max} n(M_{GROUP} - M_{TOTAL})^2 = 4(2-5)^2 + 4(7-5)^2 + 4(6-5)^2 + 4(5-5)^2 = 56.000$$

$$df_{MODEL} = \#groups - 1 = 3$$
